# **Ә JF29**мт Preliminary Specifications

### **FEATURES**

- Comprehensive integration
- EAW Focusing
- U-Net (audio and communications network)
- · EAW Pilot Control and communications
- 1500 watts of class leading power

### **APPLICATIONS**

Corporate A/V, any small to medium sized live sound reinforcement, performing arts venues, houses of worship, retail, ballrooms, theaters, theme parks.

### DESCRIPTION

The JFNT Series of comprehensively integrated 2-way sound reinforcement systems elevate the notion of power and utility. Each JFNT features premium neodymium components, 1500W of amplification, revolutionary EAW Focusing processing, EAW Pilot software-accessible front-end DSP, the proprietary U-Net audio and communications network and the JF Series adaptable enclosure design. All models natively offer a combination of portable features and M10 installation points. Available universal accessories include trim plates that hide handles and provide a connection point for u-brackets and guick release flytrack segments that integrate into any enclosure and adjustable legs for use as a stage monitor.

#### **ORDERING DATA**

Description	Part Number
EAW JF29NT Black Active Speaker 115 V	2034631-00
EAW JF29NT Black Active Speaker 230 V	2034631-01
Optional Accessories	
M10 $ imes$ 37mm Forged Shoulder Eyebolt	0029818
EAW U-Bracket Adjustable S1 BLK [UBKT-S1]	2035474
EAW ACC Leg Adjustable S (2 Per) [ACC-LGS]	2035438
EAW ACC Flytrack S (2 Per) [ACC-FTS]	2035439
EAW ACC Cover Plate S (2 Per) BLK [ACC-CPS]	2035473
Fly Clip with Ring	0001386
COMPLIANCE:	
CE_EN_60065/2002_EN55103-1	1997 EN 55103-2·1997

EN 55103-1, EN55103-2, EN60065

CSA CAN/CSA 60065-03, UL Std No. 60065-03 FCC Part 15

2-WAY SELF-POWERED LOUDSPEAKER 90° × 45° See NOTES TABULAR DATA for details CONFIGURATION Subsystem: Transducer Loading LF 1x 12 in cone Vented HF 1x 1.4 in exit, 3 in voice Horn-loaded coil compression driver **Operating Mode: Amplifier Channels** Signal Processing Bi-amp LF, HF DSP w/ EAW Focusing ACOUSTICAL PERFORMANCE

Peak

130 dB

## Operating Range: 55 Hz to 20 kHz

Nominal Beamwidth:

Horz 90° Vert 45° Axial Output Limit (whole space SPL): Average

Calculated LF/HF 124 dB

#### ELECTRICAL PERFORMANCE

Input	ORMANCE	
Туре	Electronically balanced XLRF	
Sensitivity	2.5 V / 10 dBu at Limit	6.2 V / 18 dBu at Clip
Impedance	20 k ohm (balanced to chassis),	10 k ohm (unbalanced)
Wiring	Pin 1: chassis, Pin 2: signal +, Pin 3: signal -	
Loop	Electronically balanced XLRM	
DSP (50 Mflop 32 bit S	harc):	
Encoding	24 Bit / 48 kHz	
Filters	Proprietary	
Latency	2.97 ms	
User Addressable DSP		
	Array	Box
EQ	10 Parametric	10 Parametric
Delay	1200 ms	1200 ms
Level	15 dB +/-	15 dB +/-
Amplifier	LF	HF
Туре	Modified Class D	Modified Class D
Maximum Output	63 V, 1000 W @ 4 ohm	45 V, 500 W @ 4 ohm
THD + noise	< 0.3%	< 0.1%
Dynamic Range	> 105 dB	> 102 dB
Driver Protection	Integral DSP limiting	
AC Mains (Nominal)		
Connector	Neutrik PowerCon®	
	115 V	230 V
Input	100 V to 120 V	220 V to 240 V
Frequency	50 Hz to 60 Hz	50 Hz to 60 Hz
Current: Idle	0.25 A	0.15 A
In Rush	0.9 A	0.6 A
Output Limit	1.6 A	1.0 A
Fuse Rating	10 A	6.3 A
Input Selection	Analog, AES Ch 1, AES Ch 2, U-N	Net (1 - 64)

### SIGNAL DIAGRAM

LEGEND	
DSP:	EAW UX8800 Digital Signal Processor -or-
	Integral Digital Signal Processing for NT products.
HPF:	High Pass Filter for crossover –or–
	Recommended High Pass Filter.
LPF:	Low Pass Filter for crossover.
LF/MF/HF:	Low Frequency / Mid Frequency / High Frequency.
AMP:	User Supplied Power Amplifier –or–
	Integral Amplifier for NT products.
XVR:	Passive LPFs, HPFs, and EQ integral to the loudspeaker.
EAW Focusing:	Digital Signal Processor capable of implementing EAW Focusing.

#### NOTES

#### TABULAR DATA

- 1. Measurement/Data Processing Systems: Primary FChart: proprietary EAW software; Secondary Brüel & Kjær 2012.
- 2. Microphone Systems: Earthworks M30; Brüel & Kjær 4133
- 3. Measurements: Dual channel FFT; length: 32 768 samples; sample rate: 48 kHz; logarithmic sine wave sweep.
- 4. Measurement System Qualification (includes all uncertainties): SPL: accuracy +/-0.2 dB @ 1 kHz, precision +/-0.5 dB 20 Hz to 20 kHz, resolution 0.05 dB; Frequency: accuracy +/-1 %, precision +/-0.1 Hz, resolution the larger of 1.5 Hz or 1/48 octave; Time: accuracy +/-10.4 µs, precision +/-0.5 µs, resolution 10.4 µs; Angular: accuracy +/-1°, precision +/-0.5°.
- Hz, resolution fue larger of 1.5 Hz or 1/48 octave; filme: accuracy +/-10.4 µs, precision +/-0.5 µs, resolution 10.4 µs; Angular: accuracy +/-1°, precision +/-0.5°, resolution 0.5°.
   Environment: Measurements time-windowed and processed to eliminate room effects, approximating an anechoic environment. Data processed as anechoic or fractional space, as noted.
- 6. Measurement Distance: 7.46 m. Acoustic responses represent complex summation of the subsystems at 20 m. SPL is referenced to other distances using the Inverse Square Law.
- 7. Enclosure Orientation: For beamwidth and polar specifications, as shown in Mechanical Specification drawing.
- 8. Volts: Measured rms value of the test signal.
- 9. Watts: Per audio industry practice, "loudspeaker watts" are calculated as voltage squared divided by rated nominal impedance. Thus, these are not True Watt units of energy as defined by International Standard.
- 10. SPL: (Sound Pressure Level) Equivalent to the average level of a signal referenced to 0 dB SPL = 20 microPascals.
- 11. Subsystem: This lists the transducer(s) and their acoustic loading for each passband. Sub = Subwoofer, LF = Low Frequency, MF = Mid Frequency, HF = High Frequency.
- 12. Operating Mode: User selectable configurations. Between system elements, a comma (,) = separate amplifier channels; a slash (/) = single amplifier channel. DSP = Digital Signal Processor. IMPORTANT: To achieve the specified performance, the listed external signal processing must be used with EAW-provided settings.
- 13. Operating Range: Range where the processed Frequency Response stays within -10 dB SPL of the power averaged SPL within this range; measured on the geometric axis. Narrow band dips are excepted.
- 14. Nominal Beamwidth: Design angle for the -6 dB SPL points, referenced to 0 dB SPL as the highest level.
- 15. Axial Sensitivity: Power averaged SPL over the Operating Range with an input voltage that would produce 1 W at the nominal impedance; measured with no external processing on the geometric axis, referenced to 1 m.
- 16. Nominal Impedance: Selected 4, 8, or 16 ohm resistance such that the minimum impedance point is no more than 20% below this resistance over the Operating Range.
- 17. Accelerated Life Test: Maximum test input voltage applied with an EIA-426B defined spectrum; measured with recommended signal processing and Recommended Protection Filter.
- 18. Calculated Axial Output Limit: Highest average and peak SPLs possible during the Accelerated Life Test. The Peak SPL represents the 2:1 (6 dB) crest factor of the Life Test signal.
- 19. High Pass Filter: This helps protect the loudspeaker from excessive input signal levels at frequencies below the Operating Range.

#### **GRAPHIC DATA**

- 1. Resolution: To remove insignificant fine details, 1/12 octave cepstral smoothing was applied to acoustic frequency responses and 1/3 octave cepstral smoothing was applied to the beamwidth and impedance data. Other graphs are plotted using raw data.
- 2. Frequency Responses: Variation in acoustic output level with frequency for a constant input signal. Processed: normalized to 0 dB SPL. Unprocessed inputs: 2 V (4 ohm nominal impedance), 2.83 V (8 ohm nominal impedance), or 4 V (16 ohm nominal impedance) referenced to a distance of 1 m.
- 3. Processor Response: The variation in output level with frequency for a constant input signal of 0.775 V = 0 dB reference.
- 4. Beamwidth: Average angle for each 1/3 octave frequency band where, starting from the rear of the loudspeaker, the output first reaches -6 dB SPL referenced to 0 dB SPL as the highest level. This method means the output may drop below -6 dB SPL within the beamwidth angle.
- 5. Impedance: Variation in impedance magnitude, in ohms, with frequency without regard to voltage/current phase. This means the impedance values may not be used to calculate True Watts (see 9 above).
- 6. Polar Data: Horizontal and vertical polar responses for each 1/3 octave frequency band 100 Hz to 16 kHz or Operating Range.
